

Connector readiness

without the theatre.

One public observation. One honest case result. One platform matrix that keeps missing evidence visible instead of turning it into a confident guess.

BLOCKED

PLATFORM DECISION

The illustrative Microsoft path is not submission-ready. Only one public HTTPS observation is verified.

FAIL - ONE PATH

CAPTURED CASE

The server/discover request returned JSON-RPC -32601. Direct requests and authenticated behavior remain unknown.

What this sample demonstrates

A bounded conclusion

The result applies only to the exact captured request.

Evidence you can trace

Case, finding, artifact, timestamp, and SHA-256 stay linked.

Unknown stays unknown

No credentials, tools, fallback, or marketplace account was tested.

Inxy.ai is not a buyer, client, approver, or endorser. This dry run uses already-captured public evidence and performs no private or state-changing activity.

EVIDENCE BEFORE INTERPRETATION

What happened - and where the evidence stops.

The public endpoint <https://inxy.ai/api/mcp> was checked once with the MCP 2026-07-28 **server/discover** method. The endpoint responded over HTTPS with HTTP 200 and a JSON-RPC method-not-found error.

CASE	EXPECTED	OBSERVED	RESULT
TC-001	The endpoint returns a successful discovery result for server/discover.	The endpoint returned HTTP 200 with JSON-RPC -32601 Method not found.	FAIL

The boundary

Verified

Public HTTPS response; exact method; exact response class; evidence artifact and hash.

Not verified

Initialize, tools/list, tools/call, auth, rate limits, auto-fallback, legacy clients, private behavior.

Finding F-001

Public endpoint did not complete the 2026-07-28 discovery path

Observation. The anonymous server/discover request returned JSON-RPC -32601 Method not found.

Bounded impact. A client pinned to MCP 2026-07-28 and requiring this discovery method can stop at this step.

Limitation. The evidence does not show that initialize, tools/list, tools/call, auto-negotiation, legacy clients, or authenticated operation fail.

THE CLEAN NEXT MOVE

Either implement the 2026-07-28 discovery path or explicitly document the supported direct-request and legacy negotiation paths.

Acceptance check: Repeat the anonymous 2026-07-28 server/discover request and verify a non-error discovery result, then test the named direct and legacy client paths separately.

ILLUSTRATIVE PLATFORM MAPPING

One route, read against its current public checklist.

The Microsoft 365 Copilot path is used here only to demonstrate the matrix format. The company did not select this route, provide Partner Center evidence, or authorize a submission. The source page was last updated 2026-08-29 and rechecked on 2026-09-01.

Official Microsoft source: [Submit your federated connector](#)

READINESS RESULT

BLOCKED

MS-03 is evidenced. The route decision and remaining submission prerequisites are blocked or unknown.

ID	CURRENT REQUIREMENT	STATUS	EVIDENCE / BOUNDARY
MS-01	Publishing path and tenant/customer model are named	BLOCKED	None No buyer or route decision exists.
MS-02	ISV route has the required Partner Center role	UNKNOWN	None Obtain a redacted role record only after buyer authorization.
MS-03	Remote MCP server is reachable at a public HTTPS endpoint	PASS	EV-001 The public endpoint responded over HTTPS; this does not validate the remaining protocol path.
MS-04	Every declared tool has a human-readable title	UNKNOWN	None Authorized tool inventory was not available.
MS-05	Every declared tool has readOnlyHint	UNKNOWN	None Tool annotations were not inspected.
MS-06	Authenticated scenarios use configured OAuth 2.0 credentials	UNKNOWN	None Authentication was excluded from scope.
MS-07	Reviewer test account and setup instructions exist	UNKNOWN	None No credentials or private documentation were supplied.
MS-08	Display name and description are complete; description is no more than 80 characters	UNKNOWN	None Listing copy was not supplied.
MS-09	Up to 10 relevant synonyms avoid generic or competitor names	UNKNOWN	None Synonyms were not supplied.
MS-10	Color and outline logos meet the required PNG dimensions	UNKNOWN	None Listing assets were not supplied.

REQUIREMENTS 11-20

The remaining submission evidence is still unknown.

These rows are not marked failed. They remain unknown because the demonstration has no buyer-selected route, portal access, listing package, reviewer account, or authorized Microsoft surface testing.

ID	CURRENT REQUIREMENT	STATUS	EVIDENCE / BOUNDARY
MS-11	Documentation, privacy, and support links resolve	UNKNOWN	None Submission links were not identified by a buyer.
MS-12	Partner Center product name is reserved and unexpired	UNKNOWN	None Portal access was not supplied or authorized.
MS-13	Pricing, availability, markets, trial, category, capabilities, and age rating are complete	UNKNOWN	None Submission fields were not supplied.
MS-14	The correct connector/plugin package is used	UNKNOWN	None No submission package was supplied.
MS-15	Store listing contains the required description, features, screenshots, and logos	UNKNOWN	None Listing assets were not supplied.
MS-16	Every declared tool works with one reviewer test account	UNKNOWN	None Tool cases and test credentials were outside scope.
MS-17	At least three sample prompts have expected responses	UNKNOWN	None Prompt regression cases were not supplied.
MS-18	Behavior is checked in more than one relevant Copilot surface	UNKNOWN	None No Microsoft surface testing was authorized.
MS-19	Notification owners and certification notes are complete	UNKNOWN	None Submission ownership was not established.
MS-20	Functionality, security response, metadata, documentation, and rollout owners are assigned	UNKNOWN	None Buyer operating owners were not supplied.

READ THE RESULT CORRECTLY

Blocked does not mean rejected by Microsoft. It means this evidence pack cannot support a readiness claim because the route and required buyer evidence are missing. Platform acceptance remains Microsoft's decision.

WHAT A PAID REVIEW ADDS

A small decision product, not a vague AI audit.

The public demonstration proves the delivery files can stay internally consistent. A paid review begins only after the buyer names the target path, accepts the boundary, supplies safe access, and clears the reservation deposit.

01	Name the target	One platform path, current MCP route, and up to two buyer-named client or fallback paths.
02	Accept the boundary	Written scope, terms, authorization, exclusions, safe access, and up to 20 deterministic cases.
03	Capture the evidence	Requests, responses, UTC timestamps, evidence IDs, limitations, artifact paths, and SHA-256 hashes.
04	Leave a finish line	Every fix has an acceptance check, plus one agreed re-test within 30 calendar days.

The fixed pilot

US\$495 FIXED US\$247.50 to reserve. US\$247.50 on delivery.	48 HOURS After deposit, accepted scope, and required safe access.	ONE RE-TEST The agreed cases, within 30 calendar days.
---	---	--

What is deliberately excluded

- Implementation, penetration testing, and marketplace application submission.
- Legal or compliance certification, vulnerability claims, and guaranteed approval.
- Private access before cleared deposit, accepted terms, and written authorization.

Evidence first. Interpretation second.
